EDUCATION

Stevens Institute of Technology — Hoboken, NJ
Master of Science in Data Science | GPA: 3.73/4.0

Graduated: May 2026

K.J Somaiya College of Engineering — Mumbai, India
Bachelor of Technology in Information Technology, with Distinction | GPA: 3.62/4.0

Graduated: May 2024

EXPERIENCE

Data Operations Analyst — Axion24 AI Technologies, Mumbai, India

May 2025 – August 2025

- Validated field-level data integrity across ~**300K** records in two government data migrations onto AWS and Azure, **mapping legacy schemas to new data models** and applying business and technical rules to improve data quality and pipeline trustworthiness.
- Processed ~**12K** circulars per month across **3** languages with SQL and Python, **applying data governance rules** to catch metadata inconsistencies and duplicate records, cutting manual review volume by ~**30%**.
- Built the admin analytics layer tracking page visits, document downloads, and device usage, giving the board visibility into data quality and usage patterns across the platform.
- Partnered with ingestion engineers and business stakeholders to define data quality standards for auto-ingestion pipelines, helping the team sustain a **99%** uptime SLA.

Data Analyst — Accenture, Mumbai, India

January 2024 – June 2024

- Partnered with a **6-person analytics team** on a consumer retail engagement, building **statistical and quantitative models** for sales reporting and short-term revenue forecasts in Python, SQL, and SAS across product categories and store regions.
- Built Power BI dashboards on category-level sales, promo lift, and regional performance, adopted by the client's merchandising leads to plan weekly markdowns and reorder decisions.
- Ran scenario analysis and hypothesis testing on promo and pricing changes, delivering recommendations the client adopted that lifted category revenue by **8%** the following quarter.

Data Analyst — Expify, Mumbai, India

June 2022 – October 2023

- Designed and led A/B tests on pricing and checkout flow changes, working across product and engineering to align on success metrics and stopping rules without formal authority over either team, then owning rollout decisions that lifted revenue per session by **15%**.
- Designed the underlying Postgres schema and automated the weekly reporting pipeline pulling and cleaning data from Postgres, HubSpot, Google Analytics, and Excel exports using Python and SQL, cutting manual prep from **40 hours a week to under 8**.
- Built **12** Tableau dashboards on customer lifecycle and segmentation used by product and marketing leads to monitor behavioral trends in weekly business reviews.
- Wrote SQL runbooks and data dictionary entries for recurring reports, enabling teammates to self-serve common questions without escalating to analytics.

PROJECTS AND PAPERS

Forecasting Micro and Macro Economic Indicators with ML

Python • LSTM

- Built LSTM and neural network models to forecast Yahoo stock prices (micro), and Random Forest, Linear Regression, and Decision Tree models to forecast GDP growth and inflation (macro), reaching ~**95% R²** on held-out data across both tracks.
- Research published and presented at Hinweis International Conference ASIT 2024 (**150+ attendees**).

Analyzing the Global Luxury Resale Market

Data Analysis & Visualization

- Analyzed **25K+** listings scraped from resale marketplaces using Python and SQL, identifying **30–45%** price premiums for top brands and **50%** price variation driven by listed condition, with patterns indicative of pricing anomalies and inconsistent seller behavior.
- Clustered listings by buyer behavior and price band in **10** Tableau dashboards covering brand, condition, and seasonal trends.

SKILLS AND CERTIFICATIONS

Analytics: Data Governance, Data Modeling, Statistical & Quantitative Modeling, A/B Testing & Experimental Design, Hypothesis Testing, Data Integrity Validation, Customer Segmentation, Cohort Analysis, KPI Design, ETL.

Machine Learning: LSTM, Random Forest, Linear/Logistic Regression, Decision Trees, Time Series Forecasting.

Programming: Python (Pandas, NumPy, Matplotlib, Seaborn), SAS, SQL, R, Excel (pivot tables, VLOOKUP, macros).

Tools: Tableau, Power BI, Looker, Snowflake, Git, AWS, Azure, Jupyter, Databrick, Salesforce.

Certifications: Databricks Certified Data Analyst Associate; Bloomberg Market Concepts; Google Cloud Big Data & ML; IBM Data Visualization; UCSD Big Data; EDA (UIUC); Time Series ([DeepLearning.AI](#)).

AI & Automation: LLM-assisted analytics, prompt-based workflow automation, AI-driven reporting.
