EDUCATION

Stevens Institute of Technology — Hoboken, NJ
Master of Science in Data Science | GPA: 3.73/4.0

Graduated: May 2026

K.J Somaiya College of Engineering — Mumbai, India
B.Tech in Information Technology, with Distinction | GPA: 3.62/4.0

Graduated: May 2024

EXPERIENCE

Data Operations Analyst — Axion24 AI Technologies, Remote

May 2025 – Present

- Validated field-level data integrity across ~250K–300K records in two government data migrations onto AWS and Azure, applying **anomaly-detection rules** to surface irregular patterns and potential abuse signals before they reached downstream systems.
- Processed **8–12K** circulars per month across **3** languages with SQL and Python, flagging **2–3%** for metadata inconsistencies and catching 40–60 duplicate submissions monthly, cutting manual review volume by **20–30%**.
- Built the admin analytics layer surfacing **15–20 suspicious access spikes** per week across page visits, document downloads, and device usage; partnered with the product team to define suspicious-behavior thresholds and with analytics to refine behavioral baselines.
- Collaborated with ingestion engineers to integrate validation logic into auto-ingestion pipelines that flagged tampered circulars before publication, and presented anomaly findings to non-technical stakeholders, including leadership, helping the team sustain a **99%** uptime SLA.

Data Analyst — Accenture, Mumbai, India

January 2024 – June 2024

- Partnered with a 6-person analytics team on a consumer retail engagement, building **statistical and quantitative models** for sales reporting and short-term revenue forecasts in Python and SQL across product categories and store regions.
- Built Power BI dashboards on category-level sales, promo lift, and regional performance, adopted by the client's merchandising leads to plan weekly markdowns and reorder decisions.
- Ran scenario analysis and hypothesis testing on promo and pricing changes, delivering recommendations the client adopted that lifted category revenue by **8%** the following quarter.

Data Analyst — Expify, Mumbai, India

June 2022 – October 2023

- Designed and led A/B tests and experimental research on pricing and checkout flow changes, defining success metrics, setting stopping rules, and owning rollout decisions that lifted revenue per session by **15%**.
- Automated the weekly reporting pipeline pulling and cleaning data from Postgres, HubSpot, Google Analytics, and Excel exports using Python and SQL, cutting manual prep from 40 hours a week to under 8.
- Built 12 Tableau dashboards on customer lifecycle and segmentation used by product and marketing leads to monitor behavioral trends in weekly business reviews.
- Wrote SQL runbooks and data dictionary entries for recurring reports, enabling teammates to self-serve common questions without escalating to analytics.

PROJECTS AND PAPERS

Forecasting Micro and Macro Economic Indicators with ML

Python • LSTM

- Built LSTM and neural network models to forecast Yahoo stock prices (micro), and Random Forest, Linear Regression, and Decision Tree models to forecast GDP growth and inflation (macro), reaching ~95% R^2 on held-out data across both tracks.
- Research published and presented at Hinweis International Conference ASIT 2024 (150+ attendees).

Analyzing the Global Luxury Resale Market

Data Analysis & Visualization

- Analyzed 25K+ listings scraped from resale marketplaces using Python and SQL, identifying 30–45% price premiums for top brands and 50% price variation driven by listed condition, with patterns indicative of pricing anomalies and inconsistent seller behavior.
- Clustered listings by buyer behavior and price band in 10 Tableau dashboards covering brand, condition, and seasonal trends.

SKILLS AND CERTIFICATIONS

Analytics: Anomaly & Pattern Detection, Statistical & Quantitative Modeling, Fraud & Risk Analysis, A/B Testing & Experimental Design, Hypothesis Testing, Data Integrity Validation, Customer Segmentation, Cohort Analysis, KPI Design, ETL.

Machine Learning: LSTM, Random Forest, Linear/Logistic Regression, Decision Trees, Time Series Forecasting.

Programming: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, R, Excel (pivot tables, VLOOKUP, macros).

Tools: Tableau, Power BI, Looker, Snowflake, Git, AWS, Azure, Jupyter, Databricks.

Certifications: Databricks Certified Data Analyst Associate; Bloomberg Market Concepts; Google Cloud Big Data & ML; IBM Data Visualization; UCSD Big Data; EDA (UIUC); Time Series (DeepLearning.AI).
